Database Systems: Normalisation

Objectives

- To learn to identify good and poor table structures.
- To learn that poor table structures can be repaired through normalization.
- To learn normalization techniques.

Table Normalisation

- Tables are the basic unit within a relational database
- Normalisation is the process of assigning attributes to entities
 - Reduction of redundant data
 - Elimination of possible data anomalies
 - Use of controlled redundancies in order to link tables

Problems with un-normalised data

- Data Updates are less efficient and possibly error prone due to inconsistencies
- Problematic for creating views
- Indexing of data is more cumbersome

Normalisation and DB Design

- Should be part of the design process
- Entity Relation diagrams provide a high-level view
- Normalisation provides for a much lower-level view of the interaction between entities
- ER diagramming and Normalisation are closely related

Stages of Normalisation

- 1NF – First Normal Form
- 2NF – Second Normal Form
- 3NF – Third Normal Form
- 4NF – Fourth Normal Form

Conversion of DATA to 1NF

- ☛ Repeating groups to be eliminated
- ☛ Proper primary key must be selected/created
 - uniquely identifies entity rows
- ☛ Dependencies can be identified
 - Most desirable - those based on Primary Key
 - Less desirable
 - ☛ Partial – Based on part of Primary Key
 - ☛ Transitive – one non key attribute depends on another

Conversion to 2NF

- ☛ Start with 1NF data
- ☛ Write each key component on a separate line
- ☛ Write original Key on the last line
- ☛ Each Key component should be used as a new table
- ☛ Write dependant attributes after the Key on each line

Conversion to 3NF

- ☛ Start with 2NF data
- ☛ Create separate tables in order to remove transitive dependencies

Conversion to 4NF

- ☛ Data is already in 3NF
- ☛ Multiple sets of multi-valued dependencies are removed

4th Normal Form

Version 1 Table name: FIG4_14A

EMP_NUM	EMP_SERVICE	EMP_ASSIGN
10123	Red Cross	1
10123	United Way	5
10123		12

Version 2 Table name: FIG4_14B

EMP_NUM	EMP_SERVICE	EMP_ASSIGN
10123	Red Cross	
10123	United Way	
10123		1
10123		5
10223		12

Version 3 Table name: FIG4_14C

EMP_NUM	EMP_SERVICE	EMP_ASSIGN
10123	Red Cross	1
10123	Red Cross	5
10123	United Way	12

Version 1 Table name: FIG4_15A

EMP_NUM	EMP_SERVICE
1023	Red Cross
1023	United Way

Version 2 Table name: FIG4_15B

EMP_NUM	EMP_ASSIGN
1023	1
1023	5
1023	12

Worked Example

PROJ_NUM	PROJ_NAME	EMP_NUM	EMP_NAME	JOB_CLASS	CHG_HOUR	HOURS
5	Evergreen	103	June E. Arbough	Elect. Engineer	\$84.50	23.8
		101	John G. News	Database Designer	\$105.00	19.4
		105	Alice K. Johnson *	Database Designer	\$105.00	35.7
		106	William Smithfield	Programmer	\$35.75	12.6
		102	David H. Senior	Systems Analyst	\$96.75	23.8
18	Amber Wave	114	Annelise Jones	Applications Designer	\$48.10	24.6
		118	James J. Frommer	General Support	\$18.36	45.3
		104	Anne K. Ramoras *	Systems Analyst	\$96.75	32.4
		112	Darlene M. Smithson	DSS Analyst	\$45.95	44.0
22	Rolling Tide	105	Alice K. Johnson	Database Designer	\$105.00	64.7
		104	Anne K. Ramoras	Systems Analyst	\$96.75	48.4
		113	Delbert K. Joenbrood *	Applications Designer	\$48.10	23.6
		111	Geoff B. Webash	Clerical Support	\$26.87	22.0
		106	William Smithfield	Programmer	\$35.75	12.8
25	Starflight	107	Maria D. Alonzo	Programmer	\$35.75	24.6
		115	Travis B. Bawring	Systems Analyst	\$96.75	45.8
		101	John G. News *	Database Designer	\$105.00	56.3
		114	Annelise Jones	Applications Designer	\$48.10	33.1
		108	Ralph B. Washington	Systems Analyst	\$96.75	23.6
		118	James J. Frommer	General Support	\$18.36	30.5
		112	Darlene M. Smithson	DSS Analyst	\$45.95	41.4

Worked Example - observations

- ❁ PROJ_NUM intended to be the primary key ?
- ❁ Strong likelihood of data anomalies
 - Update
 - ❁ Modifying JOB_CLASS
 - Insertion
 - ❁ New employee assigned to a project
 - Deletion
 - ❁ Removal of employee will cause loss of other data

Worked Example : 1NF

- ❁ Primary Key
 - Use a composite key consisting of **PROJ_NUM** and **EMP_NUM**

Worked Example: 2NF

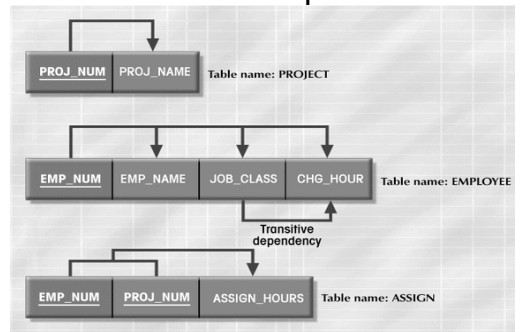

- ❁ Split the Primary key up and create new tables

PROJECT (PROJ_NUM, PROJ_NAME)

EMPLOYEE (EMP_NUM, EMP_NAME, JOB_CLASS, CHG_HOUR)

ASSIGN (PROJ_NUM, EMP_NUM, HOURS)

Worked Example: 2NF

Worked Example: 3NF

- ❁ Remove transitive dependencies
- ❁ JOB_CLASS → CHG_HOUR

PROJECT(PROJ_NUM, PROJ_NAME)

ASSIGN (PROJ_NUM, EMP_NUM, HOURS)

EMPLOYEE (EMP_NUM, EMP_NAME, JOB_CLASS)

JOB (JOB_CLASS, CHG_HOUR)

DeNormalisation

- ❁ Normalisation is one of many database design goals
- ❁ Normalised table requirements
 - Additional processing
 - Loss of system speed
- ❁ Normalisation purity is difficult to sustain due to conflict in:
 - Design efficiency
 - Information requirements
 - Processing
- ❁ Some tables may be denormalised after optimal normal form has been reached in the interests of ease of implementation and speed of data processing in order to avoid multiple joins

Boyce-Codd Normal Form (BCNF)

- Every determinant in the table is a candidate key
 - Every attribute whose value determines another attribute value in a row is a determinant
 - A 3NF table with only a single candidate key is already in BCNF
- Removal of transient dependencies to another table
